DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-3 rejected under 35 U.S.C. 103(a) as being unpatentable over Ham (6,466,291) in view of Song et al. (6,512,568) further in view of Shinjo et al. (5,495,352).

Regarding Claims 1-3, Ham discloses an in-plane switching mode liquid crystal display device having plurality of pixel regions where a first portion of one pixel region has alignment direction clockwise inclined relative to the extension direction of the data electrode, and a second portion of the pixel region has alignment direction counterclockwise included relative to the extension direction of the data electrode. Ham fails to disclose the required pixel electrode structure and the required electrode structure in the required configuration. However, Song et al. disclose a liquid crystal display having wide viewing angle, where the required pixel electrode structure is disclosed. Furthermore, Shinjo et al. disclose a liquid crystal display device with stripe-shaped unevenness on the electrodes where the required electrode structure configuration is disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required pixel electrode and the required pixel electrode configuration in Ham as taught by Song et al and Shinjo et al. respectively, in order to have a liquid crystal display device with better performance.

Conclusion
